INTRODUCTION TO SONARI DRAFT REVISED MASTER PLAN AREA

GENERAL :- Sonari is located in between Dibrugarh in the North and Sivasagar in the west and Nagaland is in South-East. The Dhodar Ali was constructed by Ahom king named Gadhadhar Singha. Sonari is located in the East of National Highway 37 at a distance of 51kilometrs. Sonari town is a district head quarter created in 2015 on the occasion of Independence Day 15TH August. Sonari was not a census town in the year 1971. However it attained its urban status from that year itself with the constitution of Sonari Town Committee. During the year1984, Sonari was the head quarter of Charaideo sub division of the Sivasagar District and Sonari town was the sub divisional head quarter. With the infusion of administrative functions, Sonari town with its enlarged urban potentials is growing presently at a very fast rate to be reckoned with.

Sonari owes its name from the existing" Sonari Tank" situated 500mts west of Sonari market near Dhudar Ali. Sonari town has mainly developed as a market centre transportation node. Sonari also attain its importance being in the easternmost gateway for the state of Nagaland. With the establishment of district head quarter at the Sonari town and the establishment of a Medical College, is expected that further development of Sonari town will take place in near future. It is also anticipated that the growth of administrative activities will also bring in additional impetus for further growth and development in the other sectors of economy of Sonari town. As a result, Sonari is most likely to experience a higher rate of urban growth and if not guide by planning principles haphazard development will be the consequential result. In order to prevent such haphazard growth of the town and to ensure the welfare of the growing population it is necessary that the development of the entire urban area is planned and guided with.

CHAPTER – 1:

1.1. LOCATION: -

Sonari is a district Headquarter, mid-size town with a municipal board of newly announced Charaideo District on 15 August 2015, in the Indian state of Assam. Sonari is an important industrial town in India. It has major Oil fields and major Tea producing areas. Sonari is a centre for tea and timber industries and is the gateway to the Mon district of Nagaland. The Sonari town may also be called as tea town of Assam as 60% of the master plan area of the town is covered by tea gardens.

Sonari is located at 27.07°N 95.03°E.[1] It has an average elevation of 97 m (318 ft).

Figure1.1: Map of India. Figure1.2: Map of Assam showing location of Sonari Town .

Figure1.3: Satellite Image of Sonari Town.

Figure1.4: Sonari Town on Google Map

1.2. REGIONAL SETTINGS:-

- NORTH : BORAH KACHARI GAON AND TEAK BANGAL GAON
- SOUTH : SONARI GRANT AND ABHOYPUR
- EAST : BANFERA TEA ESTARE AND JOBOKA TEA ESTATE
- WEST : SINGARITOLI BANGAL GAON AND MOHKHUTI PATHAR

Sonari is located in the east of National Highway 37 at a distance of 51 kms. The nearest railway station is Bhoju at a distance of 15 kms from the district head quarter and the airport is at Dibrugarh district named Mohanbari is situated at a distance of 77 kms from the district head quarter.

1.3. BRIEF HISTORY OF THE TOWN AND SURROUNDINGS: -

In the middle of the town there is a park around a historic Ahom Kingdom's Tank called Bor Pukhuri which latter known as " Sonari Tank".

It is also claimed that the original name of Sonari was Sonapur. During the Ahom King's period in 1253 AD, the Godsmiths working for the Ahom royals lived here giving the name of the town. There are even claims that Great Borahi King Mahamanikya lived in Rajadhap area of Sonari during the 15th century, in whose court Madhava Kandali translated Ramayana into Assamese before the era of Shankardeva. It is also believed that Bhogoniya Raja Jayadwaj Singha rested for days in Sonari before proceeding to Namrup during the invasion of Assam and Ahom capital by Aurangzeb's general Mirjumlal during 1663. One of the first two estates set up by Maniram Dewan has now been discovered by Dr. Pradip Baruah of the Tocklai Experimental Station of the Tea Research Association. Dewan established the Cinnamara TE at Jorhat and Senglung TE near Suffry, Sonari, around 169 years back, in 1845. Maniram Dewan was the first Indian tea planter.

1.4. CLIMATE: -

Climatically Sonari experiences similar condition with rest of the State with hot humid summer and cool winter. The Monsoon rain start from the month of May continues upto September. The highest maximum temperature during summer is 32.2°C and minimum temperature is 9.4°C. The average annual rainfall is about 3600.3mm. The prevailing wind direction of the town is from northeast to southwest.

1.5. TOPOGRAPHY: -

Sonari is located at 27.07°N and 95.03°E. It has an average elevation of 97 m (318 ft). Sonari town is flat with a gradual slope towards north and north-west. The two rivers Towkak and Teak are flowing in their zigzag course on the south and northwest of the town respectively. The Sonari town is located 67 kms from the mighty river Brahmaputra.

1.6. SOIL CONDITION: -

Surrounded by the tea gardens, forest and paddy fields Sonari is situated mostly on an alluvial flat land at a distance of 52 km from Sivasagar town and 67 kms from mighty river Brahmaputra. The two rivers Towkak and Teak are flowing their zigzag path on the south and northwest of the town respectively. Terraces of high-level alluvium of Pleistocene age occur along the south-eastern boundary of the Master plan area along the foothills to south eastern boundary of the district. One big tank namely Sonari Tank is a prominent water body, which was excavated during the Ahom region.

The altitudinally Sonari is 110.2m above the mean sea level, its latitude and longitude area 27°-3" N and 95°-2"E respectively. The general slope of the land is towards North and Northwest.

The region bears texturally three types of soil - sandy loam, loam and clayey loam. These favour the cultivation of rice, mustard, pea, vegetables, etc. Thus, geographically the soil of Sonari Town is considered as favourable for cultivation and plantation.

1.7. CITY INFLUENCE AND IT'S CHARACTERISTICS INCLUDING SETTLEMENT PATTERN:-

The settlement pattern of Sonari is a mixed one. Due to the presence of teagardens, workers from Bihar and Orissa migrated in to the region. Officials from Tea and Oil industry settled in Sonari. The indigenous people of the state live both in urban and rural areas. A good number of Marowari, Bengali, Bihari, Sikh and Muslim people reside in Sonari. Population growth has been unusually rapid, mostly due to up gradation of Charaideo sub-division into district and thereby administrative growth of Sonari is observed.

1.8. RURAL-URBAN SCENARIO: -

Both rural as well as urban characteristics can be seen in Sonari town and its surroundings. Though people use modern techniques to build their houses but there still exist houses which have been built with old methods. Many people of the town still use bamboo fence around their house. The Economically weaker section households are easily identified by their poor housing condition. Due to low incomes, their houses are mostly kutchra or semi pucca type and lack basic infrastructure.

1.9. HISTORY OF THE PHYSICAL GROWTH AND EXPANSION OF THE TOWN: -

With the up gradation of Charaideo sub-division into a district on the 15th August, 2015 Sonari has become one important town in the district. Govt. offices including Judiciary according to the norms have been established at Sonari resulting in to rapid physical growth of the town. The physical growth and expansion of the town has mainly taken place for the tea and oil industry which were developed by the British during British Era.

1.10. NEED FOR THE MASTER PLAN: -

A master plan or a development plan or a town plan may be defined as a general plan for the future layout of a city showing both the existing and proposed streets and roads, open spaces, public buildings etc. A master plan is a blueprint for the future development of the town.

A Master Plan, also called a comprehensive plan, provides a long-range vision for the built environment of a community. It guides the appropriate use of lands within a municipality in order to protect the public health and safety and to promote general welfare. Among other issues, the Master Plan can identify

- suitable locations for commercial, housing and mixed-use development;
- locations where the city should increase density, use redevelopment, or intervene in other ways;
- opportunities to extend and/or improve open space, recreational areas, and civic facilities;
- strategies from increasing economic development;
- environmental, historic and cultural resources that need conservation; and
- strategies for solving congestion and improving transit services.

As a result, the Master Plan has a direct relationship to its citizens, where we live, work, or own a business in that particular region.

Considering the present trend of growth of Sonari town, the future urban activities and needs, availability of urbanizable land and other environmental aspects. The master plan area has been delineated with the inclusion of the five numbers of villages in addition to the notified town committee areas namely Uttar Sonari, Dakhin Sonari, Grant No. 324., Rajabari Grant and Banfera Grant.

The master plan area of Sonari covers an area of 102.033 sq. km. having population of 81052 as per 2011 census and field survey conducted by Town and Country Planning, Sivasagar.

CHAPTER – 2:**DEMOGRAPHY****2.1. TOTAL POPULATION: -**

Sonari Master Plan Area (SMPA) is Located in Charaideo district. According to census of India 2011, the total population of Sonari Master Plan area is 81052 persons out of which 41829 are male and 39223 are female.

Figure 2.11: SC Population of SMPA

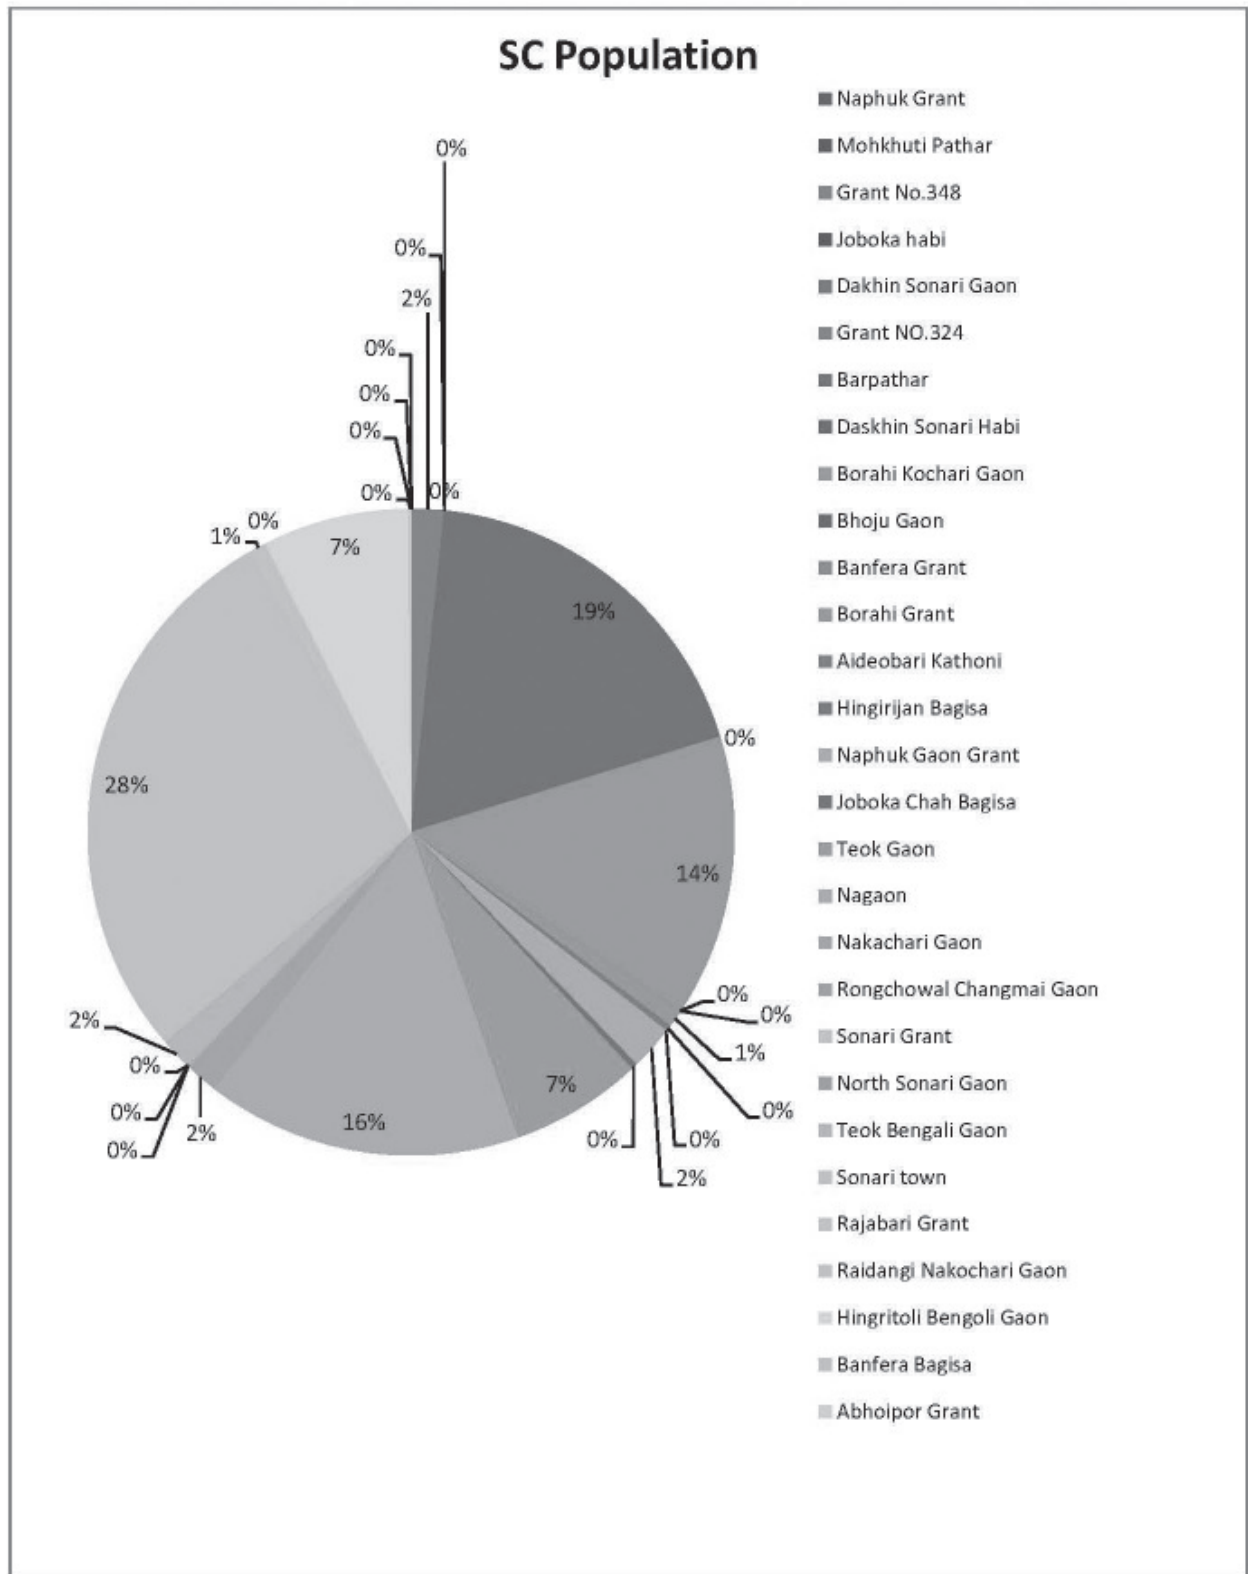

Figure 2.11: ST Population of SMPA

2.12. MIGRATION OF POPULATION: -

The robust local economy once attracted scores of people from other parts of the country to settle here in search of jobs and business opportunities. In addition to Assamese and various indigenous ethnic groups, the town is home to hundreds of people who migrated from undivided Bengal, Bihar, Uttar-Pradesh, Rajasthan to change their fortunes.

2.13. HOUSEHOLD DENSITY AND SIZE: -

There are about 8552 residential houses in the year 2011 in Sonari Draft Revised Master Plan Area housing a total population of 81052 persons, as such, household size is 5.20 persons per house and the house hold density is 268 houses per sq.km.

2.14. POPULATION PROJECTION: -

In making the future population projection for Sonari Draft Revised Master Plan Area for the period 2022-2042, all the relevant factors such as changes in fertility and mortality rate, age, sex composition of the population, existing land use pattern, socio-economic condition and expected emigrational flows have been considered.

For the projection, a general fertility rate of 0.19 for woman in a productive age group has been assumed. Mortality trends is based on recent experience of India and the trends on increase on life expectancy on the United Nations model life table for under developed countries.

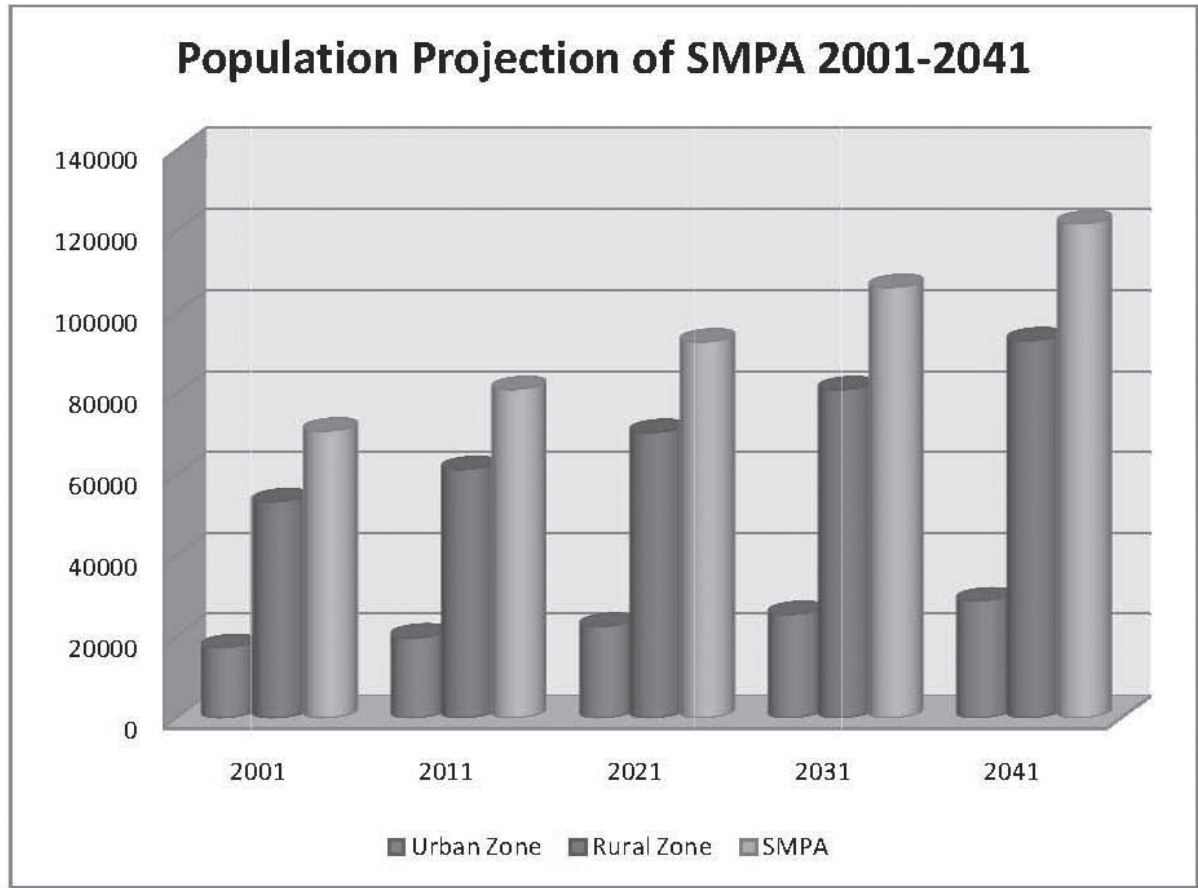

The final population projections have thus been arrived at with the entire base population of 2011 accounted for as the natural population, by adding to the natural population, the increase due to the natural growth plus the increase due to emigrational flow of trade & commerce purpose including the natural increase of migrants. The following table shows the population projections up to 2041 for the urban and rural zones of Sonari Draft Revised Master Plan Area.

Table 2.14: Population Projection of SMPA 2001-2041

Note: 2021, 2031 & 2041 population figures are estimated as per decade average growth rate of 2001 and 2011.

Figure 2.14: Population Projection of SMPA 2001-2041

CHAPTER -3 **ECONOMIC BASE AND EMPLOYMENT**

3.1. FORMAL SECTOR: -

The Master Plan for Sonari stresses on the urgent need for creation of a conducive environment in which optimum use of natural, local and regional resources can be utilized to build up a sound economic base.

Sonari is a centre for tea gardens and oilfields. There are several Tea gardens and small industries around Sonari Town. Other important industries in Sonari are Timber, Rice, Floor, Cottage and light manufacturing units. In order to provide adequate employment opportunities in the future, the establishment of new industry should be encouraged and the rate of industrial growth needs to be stepped up considerably along with the expansion of service sector, so that it can keep pace with the population growth of this area. The future employment pattern of Sonari town will largely be associated with the growth of economic activities within the area. With the increase in administrative functions as the new District head quarter and establishment of a Medical College, Sonari is likely to have a considerable growth of activities in the service sector and trade and commerce as well. Sonari being the eastern most gateway for the state of Nagaland and as well as recent discovery of Oil and Natural gas in and around Sonari. This sector will experience a rapid development. There is sample potentiality within the area for the growth of secondary sector too.

Assam is known as the place of one bud with two leaves. Assam's tea is not only famous within the country but it has also goodwill & demand in the international market. There are several tea gardens in Sonari and its suburb area. Moreover, a good number of small teagardens are also established in the suburb area of Sonari boosting the socio-economic condition of the town.

Sonari region has a scope for establishing industry associated with tea garden implements, equipment of drilling, fabrication etc and other non-ferrous utensil units, casting and general engineering industries.

3.2. INFORMAL SECTOR: -

There is an English proverb that "Necessity is the mother of all inventions". With rapid growth of Sonari town, a number of Brick-kiln and Stone crusher industries have been setup in and around the planning area to construct house, road & bridges etc. The demand for bricks and stone is increasing day by day due to the establishment of new house, office building and institution etc.

The region is rich in forest resources which have not been exploited fully. But there is a good scope of various wood based and bamboo-based industries, which can be taken up on a small and medium scale like safety matches, tea chests, furniture and pre-fabricated housing units etc.

The industrial development targets proposed above can be achieved through private sector & Governmental agencies by providing developed industrial land with necessary infrastructure like roads, power, water and drainage and incentive measures like rebate on power expenses, financial assistances in the form of loan at reasonable interest etc. The present concept of public-private partnership (PPP) can also be adapted for faster and smooth development of industries.

Sonari Town is the nerve centre of business & service of that area. Within the radius of 20 km distance, people use to come here to sell their produce and to buy necessary goods for their domestic consumption. There is a market in the middle of the town. Produces from nearby villages like Mahmora, Kakatibari are sold near this market. The area is not fully utilized and developed. There are about 856 nos. of retail shops and 87 nos. of commercial establishments within the Sonari Municipal area. In Sonari Town there are also some markets namely Sonari Daily market, Baruah market, Mini market, Super market, Sonari Sunday weekly market, Chaliha market etc. which fulfil the demand for Sonari & its suburbs. These markets have played an important role in the economic expansion of Sonari Town.

Earlier the people of Sonari need to go to Dibrugarh & Sivasagar for the banking transactions. But now, a number of nationalised banks such as State Bank of India, UCO Bank, United Bank of India, Canara Bank, Assam Gramin Vikash Bank, IDBI Bank, Axis Bank etc have established their branches at Sonari. Presently, the banking service at Sonari has improved because of these banks. The financial condition of the people has been improved along with strengthening of economic structure due to money mobilization by these banks. Moreover, insurance companies are also playing an important role for expansion of trade & commerce, social security and socio-economic development.

3.3. OCCUPATIONAL PATTERN: -

Occupational structure depicts the characteristics of employment for livelihood of the people living in a particular planning area. The engagement of people in industry, trade, commerce, white-collar jobs etc. is known as the occupation & employment character. In 2001, the total number of workers in Sonari Master Plan Area was about 21870, which constitute 38.39% of total population. In 2011, the total number of workers in Sonari Master Plan Area is about 29693 out of which urban worker constitutes 8400 and rural is 21293. The percentage of workers engaged in primary, secondary and tertiary sectors of occupations are 0.74%, 3.95% and 95.31% in the Urban Area and 10.61%, 2.36% and 87.03% in the Rural Area respectively. In the Planning area as a whole,

the worker engaged in primary, secondary and tertiary sectors of occupations are 7.82%, 2.80% and 89.38% respectively.

The occupational distribution of population in Sonari Master Plan Area of 2011 has been shown in the following table: -

Table 3.3: Occupational Distribution of Population in Sonari Draft Revised master Plan Area in 2011

Sl. No.	Category	Urban Area		Rural Area		Sonari Master Plan Area	
		No. of Workers	% of total workers	No. of Workers	% of total workers	No. of Workers	% of total workers
1	Primary Sector	62	0.74	2258	10.61	2320	7.82
2	Secondary Sector	332	3.95	502	2.36	834	2.80
3	Tertiary Sector	8006	95.31	18533	87.03	26539	89.38
	Total	8400	100.00	21293	100.00	29693	100.00

Source: Economics and Statistics Department and T&CP compilation.

Figure 3.3: Percentage of Total Worker

The above table reveals that the number of people engaged in the secondary sector is higher in the Rural Area than in the Urban Area. This is due to the fact that in the suburbs of Sonari Town, there is the existence of tea gardens. The number of people engaged in primary sector in the planning area is low in comparison to the tertiary sector. The highest number of people is engaged in the tertiary sectors in the planning area.

The people of nearby villages have been blessed with the alluvium & fertile soil by the river Teok, which begets rich crops and this is the main source of livelihood for them. Secondly, due to expansion of micro, cottage & service industry, Sonari Town has been developing day by day providing source of living to many people. In view of the above, the question of livelihood can be discussed on the following heads mentioned below: -

- Engaged in industry like Tea, Rice, Floor and Cottage etc.
- Engaged in cultivation.
- Engaged in business.
- Serving as a Govt. employee & private employee.

CHAPTER – 4

HOUSING AND SHELTER

4.1. HOUSING SCENARIO: -

Housing covers a large portion of an urban settlement at any point of time, it influences the quality of urban life, which in turn, affects the efficiency condition in Sonari Town is mainly characterized by inadequate amenities essential for standard living.

Though the houses in Sonari have been primarily designed for single family occupancy, the above figure supports the commonly observed situation of families doubling up in single-family dwelling units. According to 2011 census density of population in Sonari town is 3549 persons per sq. km. In the Master Plan Area as a whole the density of population is 1392 persons per sq. km, in 2011. The rate of construction of new houses has not kept pace with the rate of increase of population mainly in the urban area.

Residential buildings of Sonari are of mixed types. Generally, in the old residential areas of urban zone Assam type houses and in the newly developed areas R.C.C. houses have been seen. In the rural areas more than 50% houses are Kutcha.

4.2. HOUSING SUPPLY MECHANISM: -

Housing supply is the main role of the state to improve living condition of the inhabitants either by direct provision or by enabling its provision. Different policies have been taken by the government to solve the housing problems especially for poor and low-income group. Housing supply must address all social groups in the State including housing in urban areas, semi-urban areas and rural areas. In the recent years private builders and developers have come forward to solve the problems of housing in urban areas of the state by constructing flat. However, at the present such practices have not been seen in Sonari Town. In the rural areas of Master plan area a few houses have been constructed under centrally sponsored housing scheme. Recently housing in urban areas has been initiated by the central government through “Pradhan Mantri Awas Yojana – Housing for All (Urban)” scheme.

4.3. HOUSING CONDITION, TYPE OF STRUCTURE ETC.: -

Number and percentage distribution of persons living in permanent, Semi Permanent and Temporary house in 2011 are shown in the table below:

Table 4.3: Housing Condition, Type of Structure

Housing Condition	Urban Area		Rural Area		Master Plan Area	
	No. of Households	Percentage %	No. of Households	Percentage %	No. of Households	Percentage %

Figure 4.7: Number and Percentage of Households by Availability of Kitchen Facility

4.8. SLUMS – SQUATTERS AND INFORMAL SECTOR: -

The Slum in urban area is a common phenomenon in India. Every city has varied set of slums defined by location, community, income group and housing typologies. Generally, Slums can be identified by their informal settlement patterns. Slums are characterized by irregular clustering of small buildings, a lack of formal road networks, a high ratio of roof coverage to area, an absence of vegetation, and proximity to railways, highways, and other hazards such as steep slopes or low-lying areas which experience flooding.

Slum has not been identified till now in Sonari Master Plan Area.

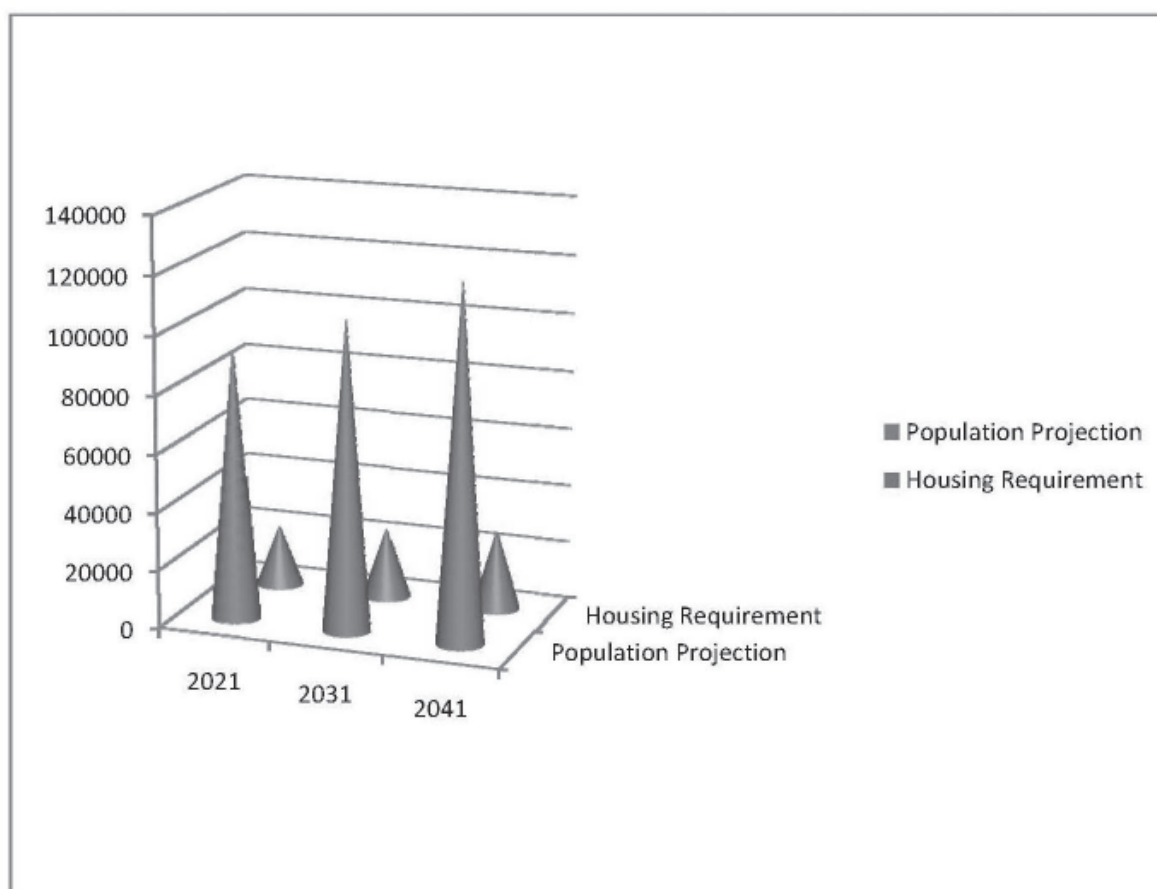

4.9. HOUSING STOCK, SHORTAGE AND NEED ASSESMENT: -

There are 1970 census houses within the Sonari Municipal Board area and 1192 houses within the Sonari town (MB) area, used as residence and residence cum other use i.e., a total of 3162 census houses in urban area of Sonari Master Plan. This shows that an average of 4.5 persons occupy per house in urban area of Sonari master plan.

To find out the housing need for future a detailed study of family size, level of obsolescence, existing shortage etc. are necessary. However, on the basis of projected population and household size of 5 persons, the gross housing needs are depicted below:

Table 4.10: Housing Requirement in Sonari Master Plan Area upto 2041

Year	Projected Population	Gross Housing Requirement
2021	92828	20628
2031	106315	23625
2041	121762	27058

Table 4.10: Population Projection and Housing Requirement in SMPA upto 2041

CHAPTER – 5

TRANSPORTATION

5.1. NETWORK OF ROADS: -

Urban road network is considered as engines of economic growth. However, the roads of Sonari urban areas are very narrow and shoulder width is insufficient to accommodate the present traffic volume for easy movement and there is also little scope for the widening. Sonari is well connected with Sivasagar, Namrup, Dibrugarh, Mon district of Nagaland by road. The historic Dhodar Ali passes through the town connecting Namrup towards east, Simaluguri, Nazira, Joysagar towards west. Sonari town is located 45 km away from the historic town of Sivasagar and roughly located between Sivasagar and Namrup town. Bhoju, the nearest railway station is well connected by major passenger trains like intercity which are 3 km. away from the town and easily approachable. Nearest junction is Simaluguri. Distance from Dibrugarh Mohanbari airport to Sonari is about 77 km and Jorhat airport is about 80 km serves the town. Indigo, Air India regularly flies to both the airports. Most of the places of the town are easily communicable by walk and bicycle. Rickshaw and Electronic Rickshaw facilities are available within the town.

Sonari being the third gateway for the state of Nagaland. Considerable amount of goods and passenger traffic by road passes through the town destined to various places of the region. There is an existing road network in Sonari but it lacks in form and pattern. The Mon High-way, Bhojo Sonari road and the Dhodor ali are the main transportation corridors and form an integral part of the existing circulation pattern of Sonari town. Other local roads are narrow and possess very little scope for future expansion.

The railway station remains always busy and requires immediate improvement. Moreover, road junctions in the town are not technically developed and it requires immediate technical intervention.

In this plan, emphasis has been given on the following aspects for effective transportation system in Sonari Master Plan Area.

- Optimum use of the existing transportation system through improved traffic operation and controls.
- Improvement of the existing road network through strengthening and widening.
- Provision for adequate parking facilities.
- Development of new roads and other transport facilities.

The plan recommends development of road infrastructure as per table given below:

Table 2.11: Category of Roads

Category of Roads	Name	Existing Width (m)	Recommended Width (m)
Principal Roads	Main Dhudor Ali	25	21 to 25
	Namtola Road	25	21 to 25
Main Roads	Nahor Ali	3.66	9 to 12
	Parbotipur Road	3.66	9 to 12
	Bank Road	3.05	9 to 12
	Baruah ali Road	6.4	9 to 12
	Court Road	6.1	9 to 12
	College Road No. 1	6.1	9 to 12
	P.C. Gogoi Path	3.66	9 to 12
Others Road	-		Minimum 6 and 3.65 for single plot

5.2. OVERVIEW OF CRITICAL ROADS AND IMPROVEMENT: -

Sonari is well connected with the rest of the country by roads and railways. The Dhudor ali have connected Sonari with other places as shown below:

- Sonari to Namrup
- Sonari to Sivasagar
- Sonari to Nazira
- Sonari to Dibrugarh .
- Sonari to Mon District of Nagaland via Tizit.
- Sonari to Arunachal Pradesh.

Sonari is also connected with railway network from Bhojo to Guwahati. The railway station of Bhojo facilitates the passengers to travel to Guwahati and also outside Assam. Beside train plying of taxis, buses, winger and trucks are playing a major role in transporting passengers and goods to and from Sonari.

Sonari town has gained importance in the field of tea industry and business owing to its industrial base and existence of nearby industrial and business towns like Sivasagar,

Demow, Namrup, Nahorkotia and Dibrugarh. This has resulted in increase of vehicles on the roads of Sonari town. On the other hand, a good number of ASTC buses, private buses and winger play through the town.

5.3. BUS TRANSPORT TERMINALS: -

At present both ASTC and private bus stations are located along the road side of Dhodor Ali within the main town. These stations serve intra -urban traffic, i.e., regional traffic but create lots of traffic congestion in the area. Taxi and Auto stands are also located by the side of the roads. These stands are also creating congestion and obstruction to the smooth flow of traffic.

The plan proposes one Bus Stop near College Stadium. It also proposes one Bus Terminus by the side of Dhodor Ali.

5.4. FREIGHT ZONES LOGISTICS: -

Presently, there is no truck terminus at Sonari. The loading and unloading from trucks are carried out by the side of road. The plan proposes a Truck Terminus at Naphuk Grant besides the Dhodor Ali.

5.5. FOOTPATHS AND BICYCLE TRACKS: -

Footpaths are normally designed for pedestrian for pleasant and comfortable walking. In Sonari, there is no any footpath in other roads of the town. There is no cycle track in the town. Exclusive lane for slow moving vehicles, pedestrians along with spaces for street vendors are also essential for overall development of a town. The hawkers and street vendors also play an important role in urban economy. The notification of vending and no vending zone by the authority is mandatory as per the provisions of the Street Vendors Act, 2014. This improves the capacity of the lanes designed for motorized vehicles and increases the safety of slow-moving vehicles and pedestrians.

The plan suggests construction of footpath in both sides of all the roads in the town by the concerned authority. The plan also earmarks cycle tracks in the town.

The width of footpath as per URDPFI guidelines is as follows:

Table 5.2: Width of Footpath

Sl. No.	Description	Width (Mtr)
1	Minimum free walkway width in residential/mixed use areas	1.8
2	Commercial/Mixed Use Areas	2.5

The URDPFI Guidelines for cycle /NMT track is given in the following table:

Table 5.3: Cycle Track

Description	Arterial Road	Sub-arterial Road	Distributary Road	Access Road
Non Motorized Vehicle	Segregated cycle track	Segregated cycle track	Cycle lane	Mixed/traffic
location	Between carriage way or street parking and footpath on either edge of the carriageway	Between carriageway or street parking and footpath on either edge of the carriageway	On the edge of the carriage adjacent to the footpath or parking	Not applicable
Gradient	1:12-1:20	1:12-1:20	1:12-1:20	1:12-1:20
Lane width	2.2 to 5.0m	2.2 to 5.0m	2.2 to 5.0m	Mixed with motorized vehicular traffic
Minimum width	2.5m for a two-lane cycle track and 1.9m for a common cycle track and footpath	2.0m for a two-lane cycle track and 1.7m for a common cycle track and footpath	1.5m	1m (painted)

5.6. PARKING: -

At present, there is no organized parking space for the cars, two wheelers in the market area. The cars are generally parked on the main road of the town. The roads are already over crowded with traffic and further encroachment on road surface by cars and two wheelers has resulted obstructed traffic flow.

The plan proposes one parking area for two wheelers and four wheelers at junction point of and Bhoju Charali and In front of Sonari College Stadium.

The recommended equivalent car space (ECS) required for different type of vehicles as per URDPFI guidelines are given in the following table for design of parking areas:

Table 5.4: Parking Space

Sl. No.	Vehicle Type	ECS
1	Car/Taxi	1.00
2	Two-Wheeler	0.25
3	Auto Rickshaw	0.50
4	Bicycle	0.10
5	Trucks/Buses	2.50
6	Emergency Vehicle	2.50
7	Rickshaw	0.80

5.7. AREAS WITH MAJOR TRAFFIC CONGESTION AND PARKING ISSUE, ACCIDENT PRONE AREA:

The maximum inter-town traffic volume is generated at Sunday weekly Market. There is an Accident-prone area near Bhoju Railway tinali.

The heavy vehicles belonging to tea industry ply daily through the town is also a cause of concern for public safety.

5.8. IMPROVEMENT OF ROTARY AND JUNCTIONS: -

The town does not have a road rotary and plan does not foresee its requirement. However, improvement of all road junctions as per IRC guidelines is urgent and important for improving the traffic scenario.

5.9. STREET LIGHTING AND PROPOSED IMPROVEMENT PLANT: -

The town is illuminated by Sonari Municipal Board with around 200 numbers of street lights of 40 watts for the convenience of the people. The Municipal Board is planning a project for solar light installation in the streets covering the 16 (sixteen) wards.

5.10. SIGNAGE – AVAILABILITY AND REQUIREMENT: -

The ULB, traffic & other concerned departments will assess the requirement of Signage and accordingly install the signage as per the rules and regulations for the beautification of the town as well as smooth flow of traffic and public convenience.

5.11. MAJOR PROPOSALS: -

- One Truck terminus is proposed at Govt. land at Naphuk Grant besides Dhudor Ali and the area is earmarked in the proposed land use map.
- One over is proposed at Namtola tinali junction.
- The authority concern may develop existing bus stand with all facilities required for commuters.
- Considering the scenic beauty of the town, the plan recommends plantation along the major roads and development of traffic points to augment the aesthetic beauty of the town.
- The authority concern may take proposal to develop the Bus stop as Bus stand notified parking area. The same is shown in the proposed land use map.

CHAPTER – 6:
INFRASTRUCTURE, PUBLIC UTILITIES & SERVICES

6.1. PHYSICAL INFRASTRUCTURE: -

6.1.1. WATER SUPPLY: -

The source of water in Sonari is mainly Tube Well, shallow tube, Ponds and Supply Water through Public Health Engineering Department. Most of the household use tube well as source of water where the supply water is not available. The only source of water is tube well and the ring well as ground water and surface water is readily available at Sonari town and its adjoining areas. Though the tube well and ring well are efficiently functioning, it will no longer be considered as free from contamination due to presence of a number of pit latrines. A comprehensive water supply scheme with treatment plant covering the population up to 2041 is the need of the hour.

The objective of a public protected water supply system is to supply safe and clean water in adequate quantity, conveniently and as economically as possible. Rising demand of water due to rapid urbanization is putting enormous stress while planning the water supply system for an area; it is evident to consider water conservation aspects, which may be possible through optimal use of available water resources, prevention and control of water and effective demand management.

As per URDPFI guidelines the norms for water requirement for institutional buildings are given below: -

Table 2.15: Requirement for Institutional Buildings

Sl. No.	Institutions	Litres per head per day
1	Hospitals (including Laundry)	-
	a) No. of beds exceeding 100	450 (per bed)
	b) No. of beds not exceeding 100	350 (per bed)
2	Hotels	180 (per bed)
3	Hostels	135
4	Boarding Schools	135
5	Restaurants	70 (per seat)
6	Day School/Colleges	45
7	Offices	45
8	Cinema, Concert Halls and Theatre	45

In addition to the above the fire- fighting water demand is also as a function of population. It is desirable that one- third of fire-fighting requirements from part of the service storage. The balance requirement may be distributed to several state tanks of strategic points. These strategic points may be filled from nearby pond streams or cannels by water tankers wherever feasible.

6.1.2. DRAINAGE SYSTEM:

The drainage system at Sonari town is not so good compared to nearby towns. There are natural channels in the both sides of town connecting the Teok River. But due to the poor drainage and sewerage system in Sonari, creates the problem of flood in low lying area during rainy season also low-lying of Dhudor ali, which passes through the middle of the town, the existing drains are not capable of draining the surface run off out completely and as a result water logging has become a regular feature during the rainy season. The beds of the drains have become shallow resulting in the crippling of their capacity to discharge drain waters effectively. Even in the winter too, this disability causes water logging on the drains thereby giving chances for rise of mosquitoes and flies. A contour survey can be carried out to study the existing drainage condition of the town.

6.1.3. SANITAION: -

In Sonari Master Plan area more than 50% household used septic tank. The percentage of household who used septic tank is almost double in urban area then in rural area. In the Master plan area still, people use open pit or other means which are not conducive for health and environment atmosphere. So, this plan suggests authority concern to take step for such type of practices and also take measures under some scheme or providing financial assistance to construct septic tank in their household or authority concern to take steps for the construction of public toilet/sewerage system. These measures will help to reduce the hazardous atmosphere in urban areas as well as in rural areas. The number and percentage of households by type of latrine facility in SMPA are shown below:

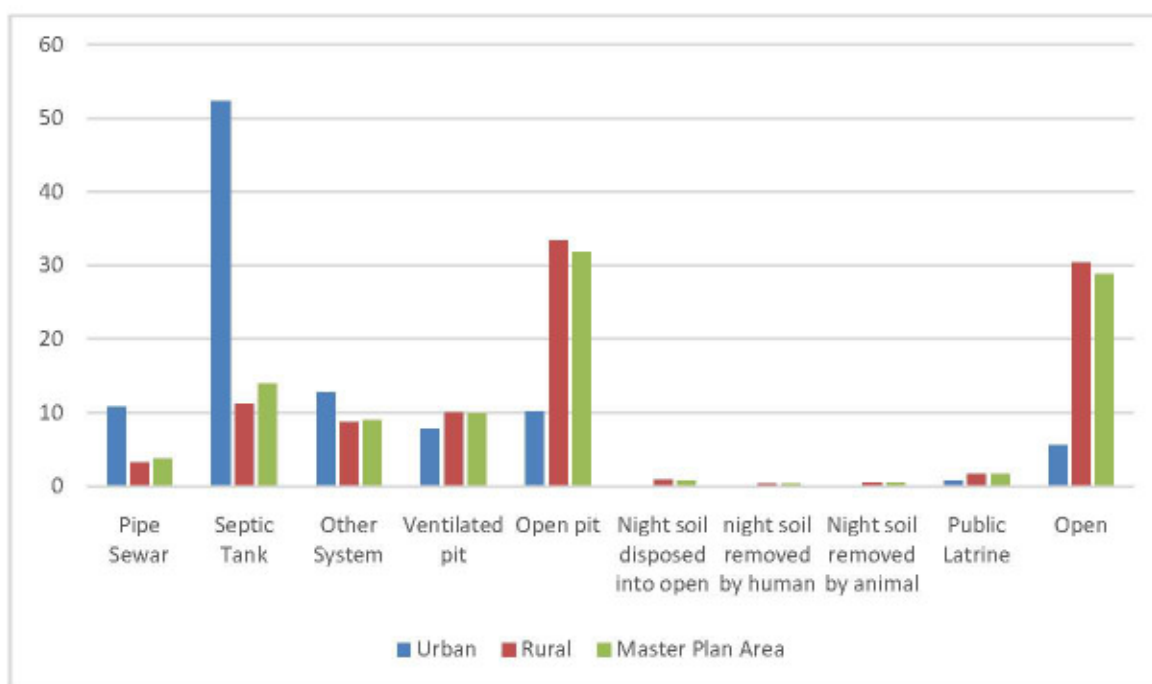

Table 6.1.4 Number and Percentage of Household by Type of Latrine Facility

Type of Latrine Facility	Urban Area		Rural Area		Master Plan Area	
	No. of Households	Percentage (%)	No. of Households	Percentage (%)	No. of Households	Percentage (%)
Pipe Sewer System	497	10.78	2042	3.19	2539	3.70
Septic Tank	2411	52.29	7124	11.12	9535	13.88
Other System	585	12.69	5568	8.69	6153	8.96

Ventilated pit	359	7.79	6413	10.01	6772	9.86
Open pit	466	10.11	21382	33.36	21848	31.80
Night Soil Disposed into open Drain	1	0.02	522	0.81	523	0.76

Source: Census of India.

Figure 6.1.4.: Household by Type of Latrine Facility (%)

The general standard for public toilets in public area and modified norms for public toilets in public places and roads recommended in URDPFI guideline are given below: -

Table 6.1.5: Norms for Public Toilets in Public Areas

Type	Norms for Toilets
Public Toilet	On road and for open areas every 1 km including parks, open air theatre, car parks and fuel station. Toilets shall be disabled friendly and in 50: 50 ratios (M / F).
Signage	Sign boards on main streets shall give directions and mention the distance to reach the nearest public convenience of visitors. Helpline number shall be pasted on all toilets for complaints / queries.
Modes	Pay and use or free in pay and use toilet sentry is allowed on payment to the attendant.
Maintenance / Cleaning	The toilets have both men and women attendants. Alternatively automatic cleaning cycle covering flush, toilet bowl, seat, hand Wash basin, disinfecting of floor and complete drying after each use can be adopted. Public toilets shall be open 24 hrs.

The urban local body can follow the above norms for construction of public toilet and maintenance thereafter.

6.1.6. SEWAGE NETWORK: -

Like the rest of the towns of the state, Sonari also does not have sewerage network and treatment plant. Human night soil is generally disposed at conventional septic tanks or low-cost sanitary pits. Till the execution of the sewerage scheme, it is recommended to encourage the people to construct sanitary latrines of their own and to cover poor families under Swachha Bharat Mission. The use of service latrine should be banned as per law for the health and hygiene of the community. It is also suggested that, concern development should initiate action to implement sewerage system for Sonari town.

6.1.7. SOLID WASTE MANAGEMENT – CURRENT SITE ASSESSMENT, LAND OWNERSHIP, PROPOSED SITE: -

The collection and disposal of solid waste in Sonari is done by Sonari Municipal Board. Sonari Municipal Board has provided dustbins in some specified locations for collection of solid waste from the households. With the help of garbage van the collected waste is dumped in the specified open dumping ground in every morning. A garbage disposal site and solid waste management site has been proposed at Rajabari Grant.

6.1.8. ELECTRIC SUB-STATION AND MAJOR TRANSFORMERS: -

Power requirement of Sonari Master Plan Area is met by the ASEB grid. Around 75% of the total population in the Town have electric connection. Sonari is also facing the problem of acute scarcity of electric power like the other towns of the state. In peak hours load shedding for one or two hours is a way of life for its residents. Since the consumption is increasing at a fast rate, the department concerned fails to cater to the needs of the people causing load shedding a bitter experience. The authority concern provides around 200 numbers Tube lights/CFLs of 40 Watts in the street of Sonari town for the benefit of the people. There is one electric sub-station at Sonari Town.

6.1.9. SOCIAL INFRASTRUCTURE :-**6.2.1. SCHOOLS, COLLEGES AND UNIVERSITIES :-**

The progress and development of a place is closely related to expansion and development of education. There are many good educational institutions in the town, catering the needs of many nearby villages and tea-gardens. Sonari is known for its eminent scholars. Schools provide education both Assamese and English Medium. Most of the schools follow syllabus of Secondary Education Board of Assam, others follows Central Board of Secondary Education (CBSE). For higher secondary (10+2) both schools follow syllabus of Assam Higher Secondary Education Council (AHSEC). Some of them are The Rajadhap LP School, The Rajadhap ME School, BPBM Higher Secondary School, PKB Girls HS School, Chah Mazdoor Vidya Niketon, Polestar Academy, Sonari Junior College, Polestar Academy, Shankaedev Sishu Vidyab Niketon, Sonari Town High School, Shankardev Shishu Vidya Niketon, Sonari Jatiya Bidyalaya, Shantipur LP School, Polestar Academy, Sonari Jatiya Bidyalaya etc., which are a host of brilliant students who are now placed across various reputed organisations/companies in India and abroad. The St Joseph's Higher Secondary School is one of the major institutes in Sonari boosting education in this locality. The Sonari College, The Sonari Junior College, The Sonari Commerce College, Junior College are some of the other major institutes of Higher Education of the locality. The Sonari Hindi High School is a Hindi-medium school. The nearest University is the Dibrugarh University.

URDPFI guidelines for educational facilities are given below:

Table 6.4: Norms for Pre-Primary Nursery school to Higher education

Sl. No	Category	Student Strength	Population served per unit	Area Requirement	Other Controls
1	Pre- Primary Nursery School	-	2500	0.08 Ha.	To be located near park
2	Primary School (Class I to V)	500	5000	Area per School = 0.40 Ha. A) School building area = 0.20 Ha. B) Play field area = 0.20 Ha.	Playfield area with a minimum of 18 m X 36 m to be ensured on effective play.
3	Senior Secondary School (VI to XII)	1000	7500	Area per School = 1.80 Ha. A) School building area = 0.60Ha. B) Play field area = 1.00 Ha.	Playfield area with a minimum of 68 m X 126m to

				C) Parking area = 0.20 Ha.	beensured oneffective play.
4	Integrated School without hostel facility (Class I to XII)	1500	90000 To 1 Lakh	Area per School = 3.50 Ha. A) School building area = 0.70 Ha. B) Play field area = 2.50 Ha. C) Parking area = 0.30 Ha.	To be located near a sport facility
5	Integrated School with hostel facility (Class I to XII)	1500	90000 to 1 Lakh	Area per School = 3.90 Ha. A) School building area = 0.70 Ha. B) Play field area = 2.50 Ha. C) Parking area = 0.30 Ha. D) Residential area = 0.40Ha.	To be located near a sport facility
6	School for Physically Challenged	400	45000	Area per School = 0.70 Ha. A) School building area = 0.20Ha. B) Play field area = 0.30 Ha. C) Parking area = 0.20 Ha.	To be located near park or sport facilities
7	College	1000 To 1500	1.25 Lakhs	Area per School = 5.00 Ha. A) School building area = 1.80Ha. B) Playfield area = 2.50 Ha. C) Parking area = 0.30 Ha. D) Residential area = 0.30 Ha.	

From the survey it has been found that the area most of the education institutions are not sufficient as per URDPFI guidelines and there are no adequate play fields and parking facilities.

So, this plan suggests to take measures by the education department as well as private institution to increase the area of primary school up to 0.40 Hectare including play field area, for High & Higher Secondary School up to 1.80 Hectare including play field and parking are and for the intermediate school up to 3.50 hectare including playfield, parking facility and hostel facility as per URDPFI guideline.

This plan also suggests for the provision of school for physically challenged child /persons in an area of about 0.70 hectare for the enrolment capacity of 400 with adequate play field and parking facility by the education department or by any NGO associated with social upliftment of the region.

The table below shows the number of students and additional school required in Sonari Revised Master Plan Area during 2022-2042.

Table 6.5: Additional School Requirement in Sonari Master Plan Area

Year	Projected Population	Additional School Required		
		<u>Pre-Primary/ Nursery</u> Student strength-500 Population served per unit-2500	<u>Primary</u> Student strength-500 Population served per unit-5000	<u>High/Higher Secondary School</u> Student strength-1000 Population served per unit-7500
2021	92828	21	10	7
2031	106315	24	12	8
2041	121762	28	14	10

Figure 6.5: Additional School Requirement in Sonari Master Plan Area

Source: Estimated by Town & Country Planning, Sivasagar

The shortage of schools in the plan area, to some extent has been fulfilled by the private institutions at present and it is also hoped that in the future, private institutions will play an important role to mitigate the shortage of primary schools as well as High and Higher Secondary schools.

6.2.2. HIERARCHY OF HOSPITALS AND HEALTH CENTRES: -

Sonari is little under developed regarding health services. In Spite of patient flow from nearby state Nagaland, only a handful doctors are available for the service. Any serious cases the patients are referred to Assam Medical College, Dibrugarh or Jorhat Medical College, Jorhat. In Sonari town, there are Sonari Town Hospital, Sonari Civil Hospital, Chanakya Medical, Sonari State Vety. Hospital, Rajaphukhuri Hospital, Teok Garden etc. are located in Sonari. Besides, there are Primary Health Centres, Secondary Health Centres and Sub Centres in specified places of Sonari Master Plan Area. In spite of that, considering the population growth in greater Sonari area, medical facilities at present are not adequate, as a result large no. of patients rush to Dibrugarh and Jorhat for better treatment. But at present, there is a construction of one Medical College in Charaideo District is under construction which will be solve the problems of serious health issues nearby towns of Charaideo district.

URDPFI guidelines for health care facilities :

In the health care facilities the size of a hospital depends upon the hospital bed requirement, which in turns is a function of the size of the population it serves. As per URDPFI guideline the calculation of number of beds is based on:-

- a) Annual rate of admission as 1 per 50 populations
- b) Average length of stay in a hospital as 5 days

Since the projected population for Sonari Master Plan upto the year 2041 is 121762, as such, the number of beds required for the said population is:-

- i) No. of beds days per year = $(121762 \times 1/50) \times 5 = 12176$
 ii) No. of beds required with 100% Occupancy = $12176/365 = 33$

The classification of healthcare facilities as URDPFI guideline is given in the following table:-

Table 6.6: Health Care Facilities

Sl. No.	Category	No. of Beds	Population served per unit	Area Requirement
1	Dispensary	-	15000	0.08 to 0.12 Ha
2	Nursing Home, Child Welfare & Maternity Centre	25 to 30	45000 to 1.00 Lakh	0.20 to 0.30 Ha
3	Polyclinic	Some observation bed	1.00 Lakh	0.20 to 0.30 Ha
4	Intermediate Hospital	200 Initially the provision may be for 100 beds including maternity beds	1.00 Lakh	Total Area = 3.7 Ha. i) Area for hospital = 2.70 Ha. ii) Area for Residential Accommodation = 1.00 Ha.
5	Family Welfare Centre	As per requirement	50,000	Total Area = 500 Sqm to 800 Sqm
6	Diagnostic Centre	As per requirement	50,000	Total Area = 500 Sqm to 800 Sqm
7	Rehabilitation Centre	-	-	As per requirement

This plan suggests to take appropriate measures by the health department for the provision of 5 nos. of dispensaries at various location within the Master Plan Area covering an area of 0.08 – 0.12 hectare per dispensary serving at least 15,000 persons. This plan also suggests to upgrade the existing civil hospital upto 200 beds with all modern health care equipment or serving at least 1(One) Lakh population. This plan also suggests to set-up a family welfare centre to serve at least 50000 persons by the health department and also a Rehabilitation centre by the Govt. or by any NGO for the upliftment of deprived class of the community.

6.2.3. PARKS AND RECREATION SPACES: -

Sonari Master Plan Area has only 0.19 sqkm of land for recreational facilities. There is also a library near Sonari College as well as in the middle of the town. There is also a park around a historic Ahom Kingdom's tank called Borpukhuri. There is also a DC Court at Rajadhap. Religious places of worship like Sarbojanin Namghar, Gurudwara Sahib, Hari Mandir, Kali Mandir, Shiv Mandir, Shanti Mandir, Mosque, Buddha Mandir etc. giving a truly secular and cosmopolitan feeling. In addition to this, numerous vacant plots of land serve as play grounds. But now these are occupied by newly constructed badges leading to shortage of open spaces in the planned area.

CHAPTER – 7:

ENVIRONMENT AND CITY BEAUTIFICATION PLAN

7.1. DESCRIPTION OF ECO-FRIENDLY AREAS: -

The Historic Dhudor Ali is passing through the Sonari town. There are several tea gardens in and around the Sonari Master Plan Area. There is a Gymkhana club golf course built sometime around 1945. This golf course was created by the tea planters. This golf course is 1.5 km away from the Sonari gymkhana and as a whole about 5 km away from the centre of the Sonari town. There are dramatic changes in elevation on this course which make it more interesting. The course is a part of the Naphuk Tea Estate. Besides, there are parks and playgrounds in the Master Plan Area.

7.2. PLAN/MEASURES FOR PROTECTION AND CONSERVATION OF ENVIRONMENTALLY – FRIENDLY ZONES: -

Being environmentally friendly simply means having a lifestyle that is better for the environment. It's all about taking small steps towards mother earth so as to make this planeta better place for our communities and generations to come. A good way would be to start with conserving water, driving less, walking more, consuming less energy, buying recycled products, eating locally grown vegetables, joining environmental groups to combat air pollution, producing less waste, planting more trees and many more. The more that we do on our part the faster we will create an environment of living that promotes sustainability.

In the environmentally friendly zone, there is more than just a good recycling programmed in place. People of the town who are committed to conservation and preservation of resources should encourage options like community play grounds, public transportation, green construction and work to change the way that fossil fuels and other resources are used to support community services.

This plan suggests following proposals for protection and conservation of environmentally friendly zones: -

- People of Sonari Town should join hand with environmental groups to protect the town and make the environment clean and green.
- Reduce, reuse, recycle waste hierarchy is the order of priority of actions to be taken to reduce the amount of waste generated and to improve overall waste management processes and programs.
- Plantation habit should be grown up among the people. For this necessary awareness camp should be organized by competent authority for conservation of natural resources and composting system.
- Steps should be taken by the authority to stop people from littering on roads. Instead, educate them to put trash and garbage in dustbins. The pile of garbage on road hampers the beauty of the city and also pollutes the air.

7.3. CITY BEAUTIFICATION PLAN/ PROPOSALS: -

To improve town's appearance and aesthetic view, neighbourhoods often try to update what is known as streetscape, which pertains to the area between the driving lanes and the edge of the private property. Partly this is a popular strategy because it is public space and it's easy for the government to dictate what will happen there. In truth, streetscape can be quite effective in uniting block faces or a series of blocks that are discordant in some way, because streetscape often includes plantings, the effect is to soften the view created by streets and hopefully sidewalks. Care in the choice of materials and in the quality of the installation makes all the difference in this form of beautification.

In addition to streetscape, sometimes we need a focal point. This might be public art and open-air theatre, fountains, a clock tower or grouping of tall grasses. If we already have a lonely statue or old historical building with nothing around it, maybe we should add planting beds of considerable size, an inviting bench or two, and maybe an interpretive sign explaining the rest of the store". A tree planting project, either on a vacant plot, in a park, or in the parkway between the sidewalk and the street is great for improving Town's appearance over the course of a few years at a relatively low cost. Voluntary schemes should be taken up by neighbourhood basis for cleaning up the park of the Town. Project should also be taken up for cleaning the river or stream. Litter collects on the banks and then ultimately in the water, especially when no trash cans are provided.

7.4. ROADSIDE PLANTATION: -

The main object of road side plantation is to provide protection to road, traffic, check soil erosion, food, fuel, fodder and timber to the society and mitigate climate change issues. Plantation is durable assets that produce fruits and raw-materials for Argo based industry, and also generate livelihood after 7 to 10 years.

This plan suggests the social forestry department to prepare project on road side plantation with details of road to be covered, length of road and species of plants to be planned with numbers of plants for entire Sonari Master Plan area.

Plantation of fruit bearing plants, suitable to local Argo-climatic condition should be done in every area of the Master plan. The authority concern should take steps for organizing camp and awareness program for road side plantation and educate the people about the benefits of road side plantation including its impact on city's landscape.

7.5. URBAN AGRICULTURE AND URBAN FORESTRY: -

Urban Agriculture is the new culture that is catching up in emerging cities. Since the population growth rate is very high, natural resource to feed the increasing population in coming days is going to be a difficult task. So, urban agriculture is seen as a big solution to the problem.

Urban forestry is the careful care and management of tree in urban settings for the purpose of improving the urban environment. Urban forestry advocates the role of trees as a critical part of

the urban infrastructure. Urban forest functions are thus often oriented toward human outcomes, Such as shade, beauty and privacy. Urban forests bring many environmental and economic benefits to town. Among these are energy benefits in the form of reduced air conditioning, reduced heating by shading buildings, homes and roads, absorbing sunlight, reducing ultraviolet light, cooling the air and reducing wind speed.

So, urban forestry scheme should be taken by competent authority for afforesting degraded forest land in the Sonari Revised Master Plan Area. This type of scheme will act against climate change by creating a carbon sink and against air pollution in the town. This plan also suggests for starting tree surveys in the town which can be conducted by NGO and college or school students. A plan should be framed to create small nurseries in Govt. school as well as in private institution where there is extra space.

7.6. PUBLIC RAIN WATER HARVESTING SCHEME: -

Rainwater harvesting is a process involving collection and storage of rain water that runs off natural or man-made catchment areas, e.g., roof top, Compounds, rock surface or hill slopes or artificial repaired impervious/semi-pervious land surface.

Due to deforestation and the consequent ecological imbalance, the ground water level is going down day by day. The constant rising demand of water supply especially from the urban areas does not match with the surface water sources, as a result of which the water reserves beneath the ground level are over exploited. This consequently results in the water level depletion.

Water harvesting apart from recharging the ground water level, increases the availability of water at a given place at a given point of time. It also reduces the power consumption. It further reduces the run off which chokes the storm water drains artificial flooding, chances of soil erosion and improves the quality of water. The plan suggests rain water harvesting scheme to be implemented by a competent authority. Moreover, the urbanization trend reduces the infiltration rate of rain water into the sub-soil thereby reduces ground water recharging.

7.7. DEVELOPMENT OF PARKS AND RECREATION SPACES: -

The Plan recommends 0.48 sq.km. of land for recreational purposes. The land earmarked for parks and recreation is not sufficient for the increasing population. This plan is not in a position to increase the land for parks and recreation as required for the proposed population due to non-availability of Government land in the plan area. The plan envisages a Town hall to meet the social and cultural needs of the town and also recommends modernizing the existing play ground with adequate infrastructure.

7.7.1. URDPFI GUIDELINE FOR PARKS AND RECREATION SPACES: -

The provision of socio- cultural facilities shall correspond to the changing urban demography and work life style.

Table 7.1: Norms for Socio-Cultural Facilities

SL. No.	Category	Population Served Per Unit	Land Area Requirement
1	Anganwadi – Housing Area/Cluster	5000	200-300 Sqm
2	Community Room	5000	750 Sqm (NBC)
3	Community Hall/Marriage Hall/Library	15000	2000 Sqm
4	Music, Dance and Drama Centre	100000	1000 Sqm

Table 7.2: Norms for Recreational Facilities

SL. No.	Category	Population Served Per Unit	Land Area Requirement
1	Housing Area Park	5000	0.50 Ha
2	Neighbourhood Park	15000	1.00 Ha
3	Community Park	100000	5.00 Ha

Table 7.3: Norms for Sports Facilities

SL. No.	Category	Population Served Per Unit	Land Area Requirement
1	Residential Unit Play Area	5000	5000 Sqm
2	Neighbourhood Play Area	15000	1.50 Ha
3	District Sports Centre	100000	8.00 Ha

7.8. BEAUTIFICATION OF MAJOR TRANSIT ZONE: -

Sonari has emerged as a major transit zone for Tea. The Tea of Sonari region transit to all over India. So, it is very much essential to beautify and upgrade the major traffic points like bus stand, Railway station and market area of this emerging transit zone of upper Assam.

7.9. ROAD SIGNAL AND STREET FURNITURE: -

Road signals are signs erected at the side of or above roads to give instruction or provide information to road users. The earliest signs were simple wooden or some milestones. But in course of time, many states of India have been adopting pictorial signs or otherwise simplified and

standardized their signs to overcome language barriers and enhance traffic safety, such pictorial signs use symbols in place of words.

Street furniture is a collective term for objects and pieces of equipment installed on streets and roads for various purposes. It included Benches, traffic barriers, bollards post boxes phone boxes, street lamps, traffic lights, traffic signs, bus stops, taxi stand, public lavatories fountains, public sculptures and waste receptacles an important consideration in the design of street furniture is how it affects road safety.

In Sonari Master Plan Area existing road signs and furniture are in adequate for increasing traffic and those are not also scientifically designed. So, the plan suggests to authority concern to take steps for the installation of warning, priority, prohibitory, mandatory, information, facilities, service, direction, position and indication signs in the roads of Sonari town, so that local people as well as outsiders can be benefitted and road safety can be maintained.

In Sonari Master Plan area presently there is no street furniture necessary for the public. The concern authority should take steps for the construction of public lavatories at important public places and installation of benches in the park and public places, post boxes, bus stop, taxi stand, waste collectors etc.

This plan recommends for preparation and execution of a city beautification plan covering street light, traffic signal etc. that will enhance the beauty of this resourceful town.

CHAPTER – 8: **LAND USE PLAN**

8.1. DEVELOPABLE AND NON – DEVELOPABLE AREA OF THE MASTER PLAN: -

Urban growth and development are often conditioned by the natural landscape like hills, water bodies, forests and manmade impediments like railway line, major roads, river, canals etc. It is also conditioned by the resources and technology employed in overcoming the growth impediments and constraints.

Proposed Revised Sonari Master Plan covers an area of 102.033 sq.km. (10203.3 hectare). Except the Dhudhor Ali, passing through the middle of the Town, no other physical features are constrains for development. The soil is very fertile and good vegetation is observed in the region.

The quality of urban life and its functional efficiencies are governed by its land-use pattern. In order to understand and analyse systematically the functional relationship between various uses particularly the place of working, living and recreation, a detailed land use survey was conducted during 2019 to 2022 and is analyzed up to 2042 to estimate the present and future need of the Town. The present Sonari Municipal Board covers an area of 8.00 sq.km. (800 hectare), while the Proposed Revised Master Plan covers an area of 102.033 sq.km. (10203.3 hectare).

EXISTING LAND USE FOR REVISED MASTER PLAN FOR SONARI.

The existing various uses of land and the areas occupied by each use in Sonari Master Plan Area has been shown in the following table:

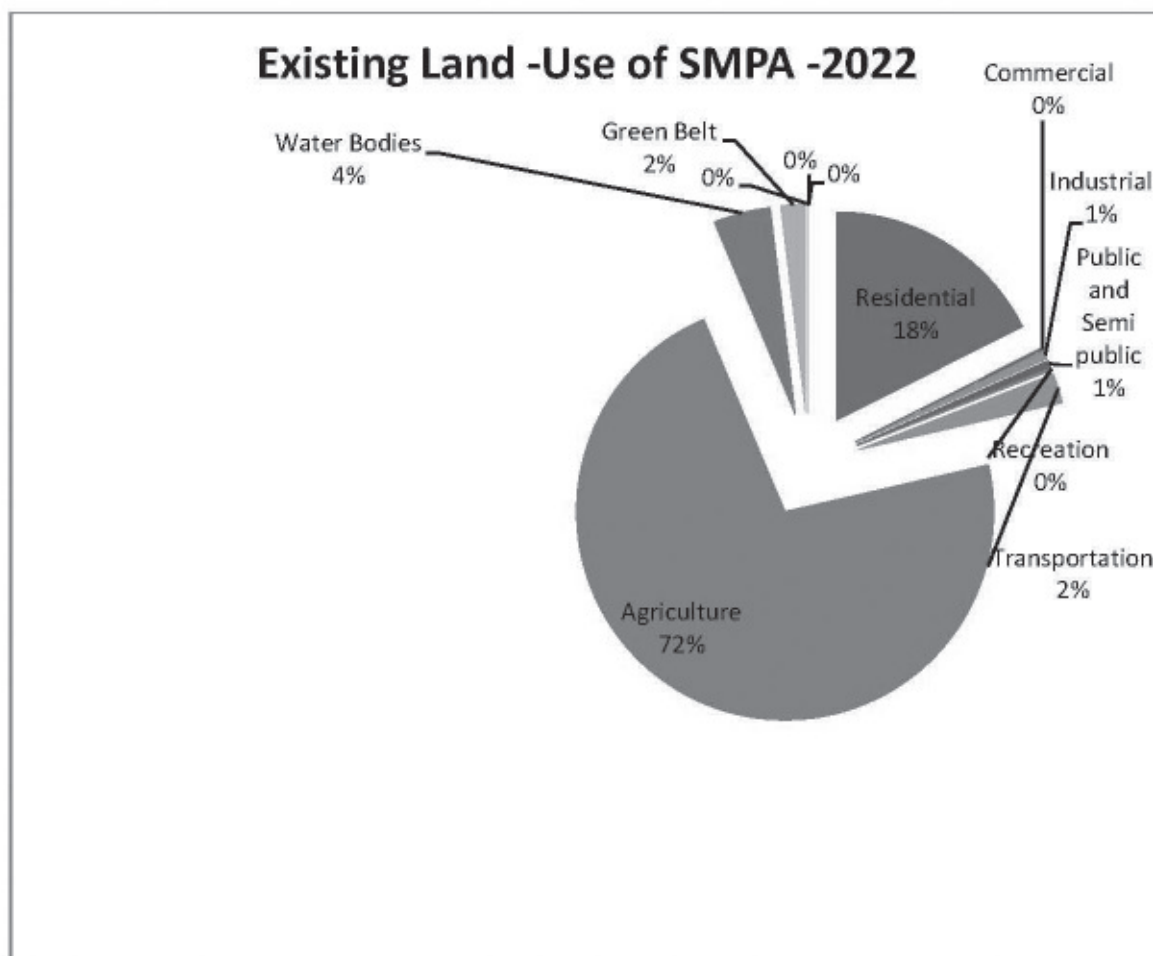

Table 8.1: Existing Land-Use of SMPA - 2022

Sl. No.	Categories	SONARI Master Plan Area in sq.km.	Percentage of Sonari Master Plan Area (%)	Percentage of Developed Area (%)
A.	DEVELOPED AREA			
1	Residential	17.91	17.55	82.11
2	Commercial	0.15	0.15	0.69
3	Industrial	0.69	0.68	3.16
4	Public and Semi public	0.53	0.52	2.43
5	Recreation	0.19	0.19	0.87
6	Transportation and communication	2.34	2.29	10.74
	Total	21.81	21.38	100

B.	UNDEVELOPED AREA			
7	Agriculture	73.65	72.18	
8	Green Belt	1.97	1.93	
9	Water Body	4.60	4.51	
	Total	80.22	100.00	
	TOTAL MASTER PLAN AREA	102.03		

Source: Town & Country Planning, Sivasagar Land Use Survey 2020.

Figure 8.1: Existing Land-Use of SMPA - 2022

Land use planning has a bearing on the expansion of the Town and put pressure on rural areas. A change in urban economic function causes changes in population. The decision to locate administrative block, commercial activities and industrial estates in urban areas stimulates general economic development and accounts for population growth resulting in opportunities for employment, increased income and business opportunities.

The following table shows the proposed distribution of land uses in Revised Draft Master Plan Sonari for Master Plan Area 2022-2042.

Table 8.2: Proposed Land-Use of Revised Sonari Master Plan Area 2042

Sl. No.	Categories	Sonari Master Plan Area in sq.km.	Percentage of Sonari Master Plan Area (%)	Percentage of Developed Area (%)
A.	DEVELOPED AREA			
1	Residential	30.61	30.00	76.93
2	Commercial	1.97	1.93	4.95
3	Industrial	1.82	1.78	4.57
4	Public and Semi public	2.53	2.48	6.36
5	Recreation	0.48	0.47	1.21
6	Transportation and communication	2.38	2.33	5.98
	Total	39.79	38.99	100.00
B.	UNDEVELOPED AREA			
7	Agriculture	54.43	53.35	
8	Green Belt	3.21	3.15	
9	Water Body	4.60	4.51	
	Total	62.24	61.01	
	TOTAL MASTER PLAN AREA	102.03	100.00	

Figure 8.2: Proposed Land-Use for Revised SMPA upto 2042

8.3. COMPOSITE ZONES OR MIXED ZONES: -

With rapid urbanization and growth of urban population the demand for housing and market complex has increased manifold. The main item of development in the area will be development of well-planned roads, drains, provision of external electrification, water supply and a site for community centre with a park and a neighbourhood shopping centre.

It is proposed to develop 0.17 hectare of land for local shopping centre, 0.32 hectare for development of a park and for neighbourhood community centre and 1.59 hectare of land for road network and roadside drain.

CHAPTER – 9:
PROPOSED PROJECT, BRIEF AND TENTATIVE FUNDING SOURCE

9.1. IDENTIFY PRIORITY SECTORS AND PROJECTS: -

The plan proposals for Sonari Master Plan Area spread up to 2042. It is quite obvious that the natural development will continue and the private developers will play an important role in this respect. As such, the private development is encouraged in conformity with the Master Plan. It is strongly recommended to stop unplanned and sporadic developments but to encourage balance planned and sustainable development where the provision for necessary physical infrastructure and socio-economic amenities are economically made possible. There are some immediate necessities as pointed out by the various stake holders, which are to be taken up as priority schemes for the Master Plan Area which is listed below:

- Widening and improvement of roads, with street lights and demarcation of notified parking area.
- Improvement of existing Sonari Daily market and others near Sonari Municipal Board office and near Sonari tank in Sonari town into a well-planned, people friendly business hub.
- Construction of a Tourist lodge and a Marriage Hall.
- Construction of a Town Hall & old age home.
- Construction of Slaughter house.
- Improvement of existing traffic signal points and setting up new ones.
- Setting up of Organic farming industry.
- Setting up of Micro Small and Medium Enterprises. (MSME)
- Improvement of existing A.S.T.C. Bus station.
- Construction of Vendor and Hawker market.
- Construction of public bus stand and truck stand.
- Construction of Auditorium.
- Improvement of existing hospital and dispensaries.
- Construction of cold storage, ware house etc.
- Development and Construction of playground and Indoor stadium.
- System of regular collection and disposal of garbage in the master plan area by the concerned authority.
- Scheme for Solid waste Management system as per waste management Rule, 2016.
- Preparation and execution of a comprehensive drainage scheme.
- Execution of independent Residential Land Development.
- Water supply scheme
- Proposal for fuel filling station and LPG go down.

Necessary schemes for development of land and to provide necessary incentive to attract industrial enterprises in the areas earmarked for industries at Teak Gaon.

In the first phase, the schemes like widening and improvement of roads, construction of new roads, provision for required spaces for parks, playgrounds and parking places and improvement of commercial and market areas including existing market, daily bazaar etc. can be taken up. The Town Committee has to play an important role in liaison with other Govt. agencies in formulation and execution of such schemes in the Master Plan Area. All the above schemes need to be carried out to make the plan area in to healthy place of living.

In addition to the above, the plan also recommends for the establishment of Health centre, construction of fly-over, construction of administrative block housing and Govt. offices under one roof.

9.2. FUND REQUIREMENT FOR EACH SECTOR/ PROJECT: -

Fund requirement for each sector project will be finalized by the ULB & concerned line department after preparation of detailed project report as per Govt. instruction.

9.3. IDENTIFY LAND SITE FOR PROPOSAL: -

The plan finds the following sites are suitable for taking up the proposals in accordance with the existing trends of growth as well as for balanced development:

- One Bus Stop near College Stadium.
- One Truck Terminus at Naphuk Grant besides Dhudor Ali.
- One parking area for two wheelers and four wheelers at Bhoju Charali and at Nahor Ali.
- Water Supply Scheme: -at ward no 14
- Solid Waste Management System: -At Rajabari Grant.
- Affordable Housing Scheme: - At ward no. 16.
- Light and Medium industrial unit: -at Teok Gaon besides Nahor Ali.
- Oil filling station at Dhudor Ali.
- Cycle track: One is from Bhoju Charali to Nahor Ali and the other one is from Sonari HS. School to Towkak River Bridge on Dhudor Ali.
- Vending Zone: In front of Bus Terminus and at Sonari College Stadium.
- Junction point: - a. Bhoju Charali b. Nahor Ali Tinali and c. Rajapukhuri Tinali.
- One Bypass is being proposed from Lachit Park via Sonari Grant Tea Garden to Dhodor Ali at ward no.16.
- One wholesale and Retail market is being proposed near the truck terminus at Naphuk Grant.

9.4. INDICATIVE SOURCES OF FUND: -

The ULB & concerned line departments will submit the DPR's to their respective departments for sanctioning fund from State & Central Government under various schemes like NLCPR, NEC, 10% pool fund etc. The ULB's can also adopt the policy of Private Public Partnership (PPP) mode for raising the fund for a few remunerative projects.

CHAPTER – 10: **DISASTER PLAN**

10.1. HAZARDS SPECIFIC PRONENESS IN SONARI: -

➤ **Earthquake: -**

As per the latest seismic zoning map of India, the Charaideo district falls under High-Risk Zone- V, where a maximum intensity of IX can be expected.

➤ **Flood: -**

Even Sonari Town is also facing urban flooding in many localities due to low lying of Dhodar Ali and lack of proper drainage system.

➤ **Soil Erosion: -**

The soil erosion is major threat to many areas due to the high undercurrent of river Tawkak.

➤ **Fires: -**

The fire takes places in Sonari due to short circuit in commercial areas, that chedhouse. Mainly fire takes place from March to April when the climate remains very dry.

➤ **Cyclone: -**

In Sonari cases related to low density cyclone occurred in some places.

10.2. NEED FOR DISASTER MANAGEMENT: -

Data on disaster occurrence, its effect upon people and its cost to countries, are primary inputs to analyze the temporal and geographical trends in disaster impact. Disaster losses, provide the basis for identifying where, and to what extent, the potentially negative outcome sembedded in the concept of risk is realized. They help to understand where, and to whom, disaster risk becomes impact. They also provide the basis for risk assessment processes, adeparting point for the application of disaster reduction measures.

Development cannot be sustainable unless disaster mitigation is built into development process. Investments in mitigation are more cost effective than expenditure on relief and rehabilitation. Prevention and mitigation contribute to lasting improvement in safety and are essential to the integrated disaster management system. Disaster response alone is not sufficient as it yields only temporary results at a very high cost. So, emphasis must be on Disaster prevention, mitigation and preparedness, which help in achieving objectivity of vulnerability reduction.

As per Section 40 of Disaster Management Act, 2005 that every department of the State Government shall prepare a Disaster Management Plan.

10.3. IMPORTANCE OF PUTTING DISASTER MANAGEMENT PLANS IN PLACE:

Disasters are events that have a huge impact on humans and/or the environment. Disasters require Government intervention. They are not always unpredictable. Floods take place in valleys and flood plains, droughts in areas with unstable and low rainfall, and oil spills happen in shipping lanes. This predictability provides opportunities to plan for, prevent and to lessen the impact of disasters.

Disasters arise from both natural and human causes, and the responses needed could stretch community and government capacity to the limit. Disasters are inevitable although we do not always know when and where they will happen. But their worst effects can be partially or completely prevented by preparation, early warning, and swift, decisive responses.

Disaster management aims to reduce the occurrence of disasters and to reduce the impact of those that cannot be prevented. The Government White paper and Act on Disaster Management define the roles of Local Authorities as well as Provincial and National government in disaster management.

North East Region has been vulnerable to many natural and manmade disasters in the past. We can notice that most of the disasters have occurred within the last two decades, and the frequency, intensity and magnitude of the disasters are ever increasing.

10.4. PLAN OBJECTIVES: -

The objectives of the Disaster Management Plan are:

- ❖ Disaster management in the routine affairs of the office
- ❖ To provide technical and humanitarian assistance during disaster
- ❖ Prompt and effective discharge of office responsibilities during disaster situations
- ❖ Ensuring safety of office infrastructure, human resource and other assets
- ❖ Ensuring safety of the beneficiaries and others
- ❖ Speedy restoration after disaster impact
- ❖ To conduct trainings and capacity building for effective prevention, mitigation and response for disasters.
- ❖ To undertake information, education and communication activities to create awareness among the communities and the general public.

10.5. LIKELY GEOGRAPHICAL EXTENT AND MAGNITUDE / SEVERITY: -

- 1) The Master Plan area is situated on a flat land with slight slopes. The river Tawkak which overflows and excess water enters in to the Master Plan Area and causes flood. Moreover, low lying of Dhodor Ali passing through the town and poor drainage system for unplanned development; enhance every chance of flash flood due to heavy rainfall. Such flash floods have been experienced during last five years.

- 2) Assam as a whole is within the Zone V of earthquake zone. Especially in 1950 Earthquake, Sonari has witnessed a large devastation. So, it can be said that geographically and geologically Sonari is situated in a very hazards prone zone.
- 3) Chances of Landslide are comparatively less in this district but might happen in the bank of Tawkak river. But fire can break out in the congested residential and commercial areas, bazaars of the town any time during leanseason. So is the risk of epidemic in the slum/basti areas. The district has faced cyclones several times in the past. Road accident, rail accident, collapse of multi-storeyed buildings etc. can occur at any time. Of course, riot is not so common in this district.

10.6. DISASTER MANAGEMENT CYCLE: -

In multi-hazard response plan, the disaster management cycle has a significant role to play. The four stages of disaster cycle have their own importance in terms of their implementation during, after and before the occurrence of any disaster.

Pre-Disaster Activities

1. Policy development and National, State, district, local level disaster organization formation
2. Vulnerability and capacity assessment
3. Prevention and mitigation
4. Preparedness, planning and training

During Emergency Activities

1. Warning (beginning before the actual event)
2. Evacuation, search and rescue
3. Emergency assistance (relief) – food, water, shelter, medical aid

Post Disaster Activities

1. Repair and restoration of life lines (power, telecommunications, water transportation)
2. Reconstruction and rehabilitation.

10.7. FORMATION OF SONARI DISASTER MANAGEMENTCELL (SDMC): -

The Master Plan recommends for formation of a Sonari Disaster Management Cell (SDMC) in the office of the Chairman, Sonari Municipal Board, as per Section 40 of Disaster Management Act, 2005.

The SDMC has to be constituted with the functionaries like Chairperson (Chairman), Vice Chairman (Co-Chairperson), Chief Executive officer (Executive Officer), Members (SDO-Civil, Health, Roads, Building, Tea & Oil industries and other relevant department), and Nodal Officer (Jr. Engineer).

The SDMC will give emphasis towards the preparation of Sonari Disaster Management Plan. The plan also recommends that the SDMC cell to co-ordinate during emergency with the District Disaster Management Authority (DDMA) located at the Head-Quarter of the District. The SDMC Cell

will provide all the available resources and manpower for Disaster Management. This Cell will mobilize the service of technical personnel for the damage survey work to help the District Administration.

The SDMC must meet at least once in six months i.e., in the month of March and September before the Disaster Season (Flood & Cyclone) of Sonari town under the chairmanship of the Chairman/Chairperson, Sonari Town Committee & to update the plan. For this, one month's prior notice should be given to all concerned departments before convening the meeting. Chairman/Chairperson should review the work of SDMC. An emergency meeting will hold whenever information is received regarding calamity.

10.8. STANDARD OPERATION PROCEDURE (SOP): -

The Master Plan recommends the SDMC for formulation of Standard Operation Procedure (SOP) for automatic response of the members during disaster as follows:

- ❖ Written guideline that precisely defines how operations are to be carried out.
- ❖ An organizational directive that establishes a standard course of action.
- ❖ Written guidelines that explain what is expected and required of the personnel.
- ❖ Standardization of activities: -
 - Identify planned and agreed upon roles & actions.
 - Promote coordination and communication amongst personnel.
 - Simplify decision making during potentially stressful conditions.
- ❖ Proper implementation of Assam Notified Urban Area Building Rules – 2014 (ANUABR) & Sensitization among stakeholders engaged for construction work/owners to use disaster resistant technologies.

10.9. RAINWATER HARVESTING: -

Sonari Zone has experienced heavy rainfall during summer season due to the south-western monsoon that leads to artificial floods not only in the plan area. So, the plan recommends adoption of rainwater harvesting system in construction activities that will reduce the volume of artificial floods in the Master Plan Area and also help to maintain the ground water level.

10.10. DOs & DON'Ts DURING

a) EARTHQUAKE: -

b) FIRE: -
